

# A Security Awareness Solution that Delivers Security Training In Real-Time.

Security Awareness Training (SAT) that transforms your staff into a human firewall creating the most robust line of defense against cyber threats.

## What's different about this Security Awareness Solution?

Humans are far more vulnerable than technology. That's why cybercriminals are targeting your staff. Today, your employees are frequently exposed to sophisticated phishing and ransomware attacks. Staff members are often regarded as the weakest security link. However, with this security awareness solution, you can empower your staff to be your greatest security asset by creating a network of human sensors.

This user-centric people-first system modifies security training based on individual users' weaknesses and skills for the best long-term results. So why tick a box when you can change your user's behavior and reduce your risk exposure?

For example, an alert is created to tell when a user downloads free software, as it's considered risky behavior by the IT department. Immediately a customized message is sent to the user. This realtime response reduces the frequency of alert events over time; a behavior change has occurred. There is a measurable and significant reduction in the recorded incidents of users triggering that event.

» Deliver the right message to the right user at the right time, anywhere, on any device. «

## Key Features:

- Delivering contextual training in real-time.
- Real-time responses to user behavior - train employees exactly when they display risky behavior.
- Unlimited phishing simulations.
- Unlimited cyber knowledge assessment quizzes.
- Risk and compliance reporting suite.
- Tracks behavior to allow behavioral change to be tracked over time.
- Allows IT to provide senior management with demonstrable ROI metrics.
- Customizable real-time alerts.
- SaaS platform - NO clients/agents required.
- Offering seamless integration with AD/AAD for SSO.
- Dedicated MS Teams App.
- PhishHuk Outlook Email Client Plugin.
- Automatically send training content, policy reminders, data regulations, and compliance standards to staff when they engage in risky cyber behavior.
- Send relevant snippets from company policy documents tied to the specific user activity in real-time.
- Maximise ROI on your technical defenses.
- Reduce admin overhead by delivering repeatable and consistent training content.
- World class customer support.

## Phishing Simulation Training (Scheduled)

Built for scale and caters to companies of all sizes. Schedule unlimited regular and advanced simulated phishing tests to assess the level of phishing susceptibility in your business. Comprehensive and customizable library of “known-to-work” phishing templates, updated regularly to reflect current threats. Get phishing results, including your industry benchmark.

- Recreate any phishing attack, including ransomware, BEC, wire fraud, CEO fraud, and advanced phishing attempts.
- Phishing attacks with links, attachments, and fake login pages.
- Simulate phishing attacks impersonating internal email addresses.
- Avoid users tipping each other off by using burst mode, which sends multiple templates in one campaign.
- Phishing tests that auto-enroll users in training.
- Every user interaction is fully recorded for reporting.
- Identify repeat offenders, highrisk departments, or locations.
- Identify geo-location, operating system, and browser edition.
- Raise staff awareness of Smishing by sending customizable phishing text messages to their cell phones.

## Demonstrating ROI from Security Awareness Training

Without robust results to share, you may find yourself answering questions from business leaders about the actual value of your Security Awareness Training (SAT) investment. This solution allows you to see the results and crucially be able to demonstrate those results with:

- Enterprise-level reporting, showing metrics and charts for phishing simulations and training, ready for management.
- Easily demonstrate ROI on your technical defenses.
- Communicate the long-term value of actual behavioral change and how slow nurturing today can lead to incredible organizational security in your company's future.

A solutions that makes your job easier and allows positive and informed decision making for future security training investment.

## We Also Offer Additional Options

- » Clients can upload any of their existing content such as policies, courses, videos, powerpoints, pdf and word documents on ANY TOPIC (not just security awareness).
- » We automatically analyse all emails reported by staff to determine if they are true or false positives. If true positives are identified all copies of that email can be quarantined in order to avoid any user being tricked.

## Data Privacy

**GDPR, CCPA, Kenya Data Protection, POPI Act, and more.**

Articles 39 and 47 of GDPR require companies to raise the level of security awareness of their staff. We've worked with clients across the globe to build security-training programs that educate their teams to support and safeguard their systems and data; and meet training requirements mandated by GDPR and other regulations.
